Vision for WIGOS in 2040

Progress and next steps

Lars Peter Riishojgaard
WMO Secretariat
Overview

1. Why a Vision for WIGOS in 2040?
2. Drivers for a new Vision
3. Vision for WIGOS/Space in 2040
4. Vision for WIGOS/Surface in 2040
5. Toward an integrated Vision for WIGOS in 2040
1. Why a Vision for WIGOS in 2040?
Why a "Vision for WIGOS in 2040"?

• Serves a reference for WMO Members and other service providers, providing context and expected boundary conditions relevant for observing system developments
• Forcing agent for satellite agencies – current 2025 Vision too near-term
• Sets frame for future systems deployment, development and integration
• Cg-17: Develop a “Vision for WIGOS in 2040”, to be submitted to CG-18 in 2019
2. Drivers for a new long-term Vision
The world in 2040?

Future State 2030 (KPMG, 2015)

• Global megatrends impacting governments and citizens

While they are highly interrelated, the megatrends can broadly be grouped into trends reflecting changes in the status and expectations of individuals, changes in the global economy and changes in the physical environment.
#1 Demographics

- Higher life expectancy and falling birth rates are increasing the proportion of elderly people across the world, and challenging the solvency of social welfare systems including pensions and healthcare.
- Some regions are also facing the challenge of integrating large youth populations into saturated labor markets.
#3 Enabling technology

- ICT-based technologies have enabled R&D and growth of technologies in many fields such as applied science, engineering, health and transport.
- Exponential growth in the volume and speed of access to information can generate new markets and challenge existing institutions.
- While developed countries may have greater access to many of these technologies for less developed countries, many innovations provide 'leapfrog' opportunities for less developed markets.
#6 Economic power shift

**The evidence of change**
- Developing countries will account for an estimated 57% of global GDP by 2030.\(^5\)
- Developing countries will be home to 440 of the world’s fastest growing cities, generating 47% of global GDP growth through 2025.\(^6\)

**The consequences of economic power shift**
- The ‘global south’ as the engine for growth
- Emerging multi-polar world order
- Innovation as the source of sustaining growth
- Increased consumption base driving economic opportunities
#7 Climate change

- By 2050, costs of extreme weather could reach up to 1% of world GDP pa.
- With warming of 3-4°C, up to 200 M people could become permanently displaced due to rising sea levels, flooding, and droughts.

**The Developing World Will Shoulder**

75-80% of adaptation costs, with East Asia and Pacific regions carrying the highest costs.¹⁰²

**Local Mitigation Efforts Are Increasingly Important**

Cities account for 60-80% of energy consumption and are responsible for the same portion of global CO₂ emissions.¹¹⁰

The consequences of climate change

- Unpredictable, dramatic ecosystem impacts
- The challenge of global cooperation
- Pressure to adapt to 'locked-in' effects of global warming
- A greater role for cities
#8 Resource stress

The evidence of change

The population is growing and so is the middle class:

<table>
<thead>
<tr>
<th>Year</th>
<th>Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>2010</td>
<td>6.9bn</td>
</tr>
<tr>
<td>2030</td>
<td>8.3bn</td>
</tr>
</tbody>
</table>

50% INCREASE

in food production will likely be necessary to feed this more demanding population.\(^\text{126}\)

40%

Estimated global gap between water supply and demand by 2030.\(^\text{121}\)

TODAY

2030

The International Energy Agency projects an approximate 40% increase in global energy demand by 2030.\(^\text{122}\)

DRIVEN BY

Economic growth
Population growth
Technological advancements
"If nothing is done, we will run out of water before we run out of oil"
#9 Urbanization

- The number of megacities (pop. 10+ million) will increase from 20 today to 35 in 2025.
3. Vision for WIGOS/Space in 2040
Vision for WIGOS/Space 2040

Initial draft prepared by WMO/CBS Expert Team on Satellite Systems (ET-SAT), using input from:

- the WIGOS Space 2040 workshop, Geneva, 18-20 Nov 2015
- the Coordination Group for Meteorological Satellites (CGMS)
- the Inter-Programme Coordination Team on Space Weather (ICTSW).

Draft v1.0 based on feedback received from a series of consultations:

- WMO Presidents of Technical Commissions meeting (19-20 January 2016)
- WMO CBS Inter-Programme Expert Team on Satellite Utilization and Products (IPET-SUP-2, 23-26 February 2016)
- 2016 meeting of the Coordination Group for Meteorological Satellites (CGMS).
4. Vision for WIGOS/Surface in 2040
Vision for WIGOS in 2040; Surface

- Drafting Workshop organized by OPAG-IOS in Offenbach, August 2016, involving primarily CBS Experts
- User Workshop in Geneva, October 2016, involving a broader user community (all WMO technical commissions, donor agencies, GCOS, WCRP, GFCS, Global Cryosphere Watch, World Bank, …)
Vision 2040 - surface-based component

• Preamble
• High level goals to guide evolution of WIGOS
• Link to WMO Strategic Plan
• Using existing, new and emerging technologies
• Leading to better data, products and services from NHMSs
• WMO, working with partners
• Major changes → science, IT, products, training, …
• Rapid changes in implementation agents …
• … but principles of sharing observations remain
• Supersedes Vision 2025 – reflects broader scope of WIGOS; updates on observing technologies and their development
• To be combined with Vision 2040 Space
5. Toward an integrated Vision for WIGOS in 2040
Integrated Vision for WIGOS in 2040

• Following the October 2016 Workshop, decision made to develop an overarching Vision for WIGOS in 2040, and to include the existing Space- and Surface-based Vision documents as Annexes, once completed.

• This plan was subsequently endorsed by the Commission for Basic Systems and the Inter-commission Coordination Group for WIGOS (ICG-WIGOS).

• The current versions of the Vision for WIGOS in 2040, Annex I (Space) and Annex II (Surface) are included in CGMS-45 WMO-WP-1.
WMO Executive Council (May 2017)

- **Recommends** {...} that the current draft Vision developed by a community of technical commission experts and representatives by the space agencies and user communities under the leadership of ICG-WIGOS [EC-69-inf05-1(1)-WIGOS-Decisions-VISION-2040_en] be used as the basis for further consultation with Members, satellite operators, and user communities;

- **Decides** that the Inter-commission Coordination Group on the WMO Integrated Global Observation System (ICG-WIGOS) take ownership of the further development of the Vision, including the work necessary for the integration of the two drafts into one coherent Vision document, with a view to have it approved by the Eighteenth World Meteorological Congress in 2019.

</table>
Summary and Conclusions

• Draft *Vision* documents for the components of WIGOS (surface- and space-based).

• Per Decision 5.4.2(1)/1 (CBS-16), ICG-WIGOS to take the lead in intergrating these two statements into a common framework as an over-arching Vision for WIGOS in 2040.

• ICG-WIGOS now taking the lead in developing these into an over-arching coherent *Vision for WIGOS in 2040*, with the aim of submitting it to Cg-18 (2019) for its approval.

• CGMS has been heavily involved in the development of the Space-based Vision, and will be given the opportunity to comment also on the integrated document.
